## Application Data

The standard range of fuses for low voltage industrial and general purpose applications meet the requirements of BS88 and IEC 60269. By using advanced fuse technology, current ratings up to 400A have compact dimensions but retain standard dimensional and performance requirements. These designs are for 315/240V systems. The standard range of fuses are available from 2-1250A in the following tag forms: Offset Blade - Offset Bolted - Center Bolted.

Supplementary ranges cover applications up to 660Vac and 500Vdc including those with nonstandard tag fixings.

Cooper Bussmann fuses are manufactured under quality systems independently assessed to BS5750 (ISO9002) and appropriate ratings carry the ASTA20 endorsement.

Selecting fuses is relatively simple and effective. The following notes cover the majority of applications. For further information contact our Application Engineers at 636-527-1270.

### Circuit Loading

The current rating of the fuse should not be less than the full load current of the circuit. The circuit should be so designed that small overloads of long duration will not be of frequent occurrence.

### Cable Ratings & Protection

There is an increasing move away from 70°C PVC insulation to materials that are more environmentally friendly, for example 90°C XLPE. The ratings of fusegear, switches, accessories, etc. are generally based upon the equipment being connected to conductors intended to be operated at a temperature not exceeding 70°C in normal service.

In view of the above, it is recommended that the practice of designs based upon conductor temperatures of 70°C be regarded as the norm. The equipment manufacturer should be consulted to ascertain the reduction of nominal current rating of the equipment if conductor temperatures exceeding 70°C are used. In addition, an overriding factor is often voltage drop.

Fuses with gG characteristics protect associated cables against both overload and short circuit current, provided that the current rating of the fuse 1N is equal or less than the current carrying capacity of the cable 1z.

In motor circuits, the motor starter will provide the overload protection and the fuses will provide the short circuit protection. The maximum fuse size that can be used depends upon the type of cable used and is determined using the appropriate K factor. The following table gives the maximum sizes of fuses that are recommended for two popular cables with copper conductors, 70°C PVC ( $K = 115$ ) and 90°C thermosetting ( $K = 143$ ).

### Protection Against Electrical Shock

For a TN System, a disconnecting time not exceeding 5s is permitted for a distribution circuit. The maximum values of earth fault loop impedance (Z<sub>s</sub>) of 240V for Cooper Bussmann gG fuses to BS88: Parts 2 and 6 are:

Rating (A)	Z <sub>s</sub> Ohms	Rating (A)	Z <sub>s</sub> Ohms
6	14	100	0.44
10	7.7	125	0.35
16	4.3	160	0.27

50	1.1	500	0.073
63	0.86	630	0.054
80	0.60	800	0.044

### Ambient Temperature

The de-rating, in terms of current, of 0.5% per °C above an ambient of 35°C is recommended.

### Interrupting Rating

The standardized interrupting rating values are 80kA for voltages of 415Vac and above, and 40kA for dc applications. The 240Vac designs have a breaking capacity of 50kA.

### Coordination Ratio

All fuses to BS88 Parts 2 and 6 will give a coordination ratio of 2:1; and for most practical situations a ratio of 1.6:1 (two steps in the R10 series). Example: an upstream fuse rated at 160A will coordinate with a downstream fuse rated at 100A.

### Current and Energy Limitation

The range of fuses have pre-arcing I<sup>2</sup>t values towards the bottom limits of BS88 Parts 2 and 6. This ensures excellent current and energy limitation. They also have lower power losses at rated current. This assists in the appropriate interchangeability with other makes of fuses.

### Transformers

When fuses are used on the primary side of transformers, the normal fuse current rating should be at least twice the nominal transformer primary current.

### Fluorescent Lighting

The normal fuse current rating should be at least twice the

normal full load current of the maximum number of lights to be simultaneously switched.

### Capacitor Circuits

For power factor correctionIn capacitor circuits, the fuse should be chosen with a current rating greater than 1.5 times the rated capacitor current. This takes into account the high inrush current, circuit harmonics and capacitor tolerances.

### Motor Circuits

In motor circuits, the fuse has to withstand the motor's starting current and often requires a higher rating than the motor's full load current. Coordination recommendations are made by the manufacturers of motor starters in accordance with IEC 60947-4-1. To get Type 2 coordination with fuses, tests are performed with the latest gG or gM fuses to BS88 or IEC 60269 that have pre-arcng I<sup>2</sup>t values towards the bottom of specified limits. This means that Cooper Bussmann fuses are suitable to provide Type 2 coordination.

Extended dual ratings of motor circuit protection fuses with gM characteristics are available in most popular fuse sizes to extend the use of associated equipment with appropriate economies. In the majority of applications, gG fuses are used. It is not essential to use gM fuses for motor circuit protection, they simply extend the utilization of standard equipment.

Below is a table of recommended fuses at 415V. In most applications, the run-up time is less than 5 seconds and duty is infrequent - no more than twice per hour. The next larger rating should be used for more demanding applications.

## CSA Type P and Type D fuses

## CDS, CDN &amp; PON Type P &amp; D

**Specifications**

**Description:** CSA time-delay Type D & P fuses.

**Dimensions:** See Catalog Numbers table and Dimensions illustration.

**Construction:** Fiberglass body.

**Ratings:**

Volts: — 250V (CDN & PON)  
— 600V (CDS)

Amps: — 10-600A

IR: — 10kA minimum

**Agency Information:** CE, CSA Certified to C22.2 No. 59.1.

**Features and Benefits**

- Economical fuse in a variety of ratings for applications not requiring time-delay.

**Typical Applications**

- Lighting, heating and other circuits not subject to temporary surges and where available short-circuit current are relatively low.

## HRCI-J fast-acting fuses

### CJ HRCI-J

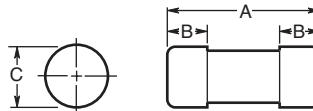

#### Specifications

**Description:** HRCI-J fast-acting fuses are industrial duty fuses with the excellent current-limiting characteristics of fast-acting HRCI-J fuses to limit damage to equipment and installations by the thermal and magnetic energy associated with a large short-circuit fault current. Overload characteristics limit cable damage due to low overload currents.

## BS 88 British Standard low voltage fuses

### SSD, NSD, ESD BS 88 Part 1

#### Specifications

**Description:** The NSD and ESD are low voltage fuses complying with general purpose gG characteristics.

**Construction:** Ceramic body.

#### Ratings:

Volts: — 240-550Vac (See Catalog Numbers table)  
 Amps: — 2-63A (See Catalog Numbers table)  
     — 20M25-63M100A Motor Starter ratings (See Catalog Numbers table)  
 IR: — 80kA

**Agency Information:** CE, Meets the requirements of BS 88 Part 1 and IEC 60269-1.

**Mounting:** Offset blades.

#### Basic Catalog Numbers

### STD, NITD, AAO, BAO, OSD, CEO, DEO BS 88 Part 1

#### Specifications

**Description:** The NITD to DEO types are low voltage fuses complying with general purpose gG characteristics.

**Construction:** Ceramic body.

#### Ratings:

Volts: — 240-550Vac (See Catalog Numbers table)  
 Amps: — 2-200A (See Catalog Numbers table)  
     — 20M25-200M315A Motor Starter ratings (See Catalog Numbers table)  
 IR: — 80kA

**Agency Information:** CE, Meets the requirements of BS 88 Part 1 and IEC 60269-1.

**Mounting:** Offset bolted blades.

#### Typical Applications

- The STD type are used in 240V street lighting cut-outs.
- NITD to DEO types used for industrial and general purpose applications

## BS 88 British Standard low voltage fuses

### AC, AD, BC, BD, CD, DD, ED, EFS BS 88

#### Specifications

**Description:** Low voltage fuses that comply with general purpose gG characteristics and available up to 400A with two hole mount and up to 1250A with four hole mount.

**Construction:** Ceramic body.

#### Ratings:

Volts: — 415/550Vac, 250Vdc (See Catalog Numbers table)

Amps: — 2-400A (See Catalog Numbers table)

— 63M80-400M500A Motor Starter ratings (See Catalog Numbers table)

## DIN style Type D and Neozed low voltage fuses

### D16, D27, D33, D125 Type D

#### Specifications

**Description:** DIN style Type D low voltage fuses.

**Dimensions:** See Catalog Numbers table and Dimensions illustrations.

**Construction:** Ceramic body.

#### Ratings:

Volts: — 500Vac

Amps: — 2-100A

IR: — 100kA

**Agency Information:** CE, "D" type fuses complying with DIN 49360 Part 2 and DIN 49515, operating class gL.

## IEC & British Standard Fuses

# Class gG/gL IEC industrial ferrule fuses

## C08G, C08M, C10G, C10M, C14G, C14M, C22G, C22M

### Specifications

**Class:** gG/gL and aM

**Description:** IEC ferrule fuses are available in physical sizes and amp ratings for system voltages of 250, 380, 400, 500 & 690VAC.

**Construction:** Ceramic with silver-plated copper endcaps

**Ratings:** See Catalog Number tables.

### Features and Benefits

- All fuses are available with an operated visible fuse indicator.
- Sizes 14x51 & 22x58 available with a built-in striker for micro-switch operation and remote indication.

### Typical Applications

- Class gG/gL and aM fuses are intended for industrial applications.

## HRC fuse holders

### CAMaster

#### Specifications

#### Catalog Symbol:

See table below.

#### Description:

The CAMaster HRC fuse holder features a unique cam-action for easy fuse removal while allowing significantly improved contact pressure between fuse carrier and base contact that enhances electrical performance. A range of lockable safety carriers for the fuse holder (catalog reference: LSC), are available.

#### Ratings:

Volts: — 690V

Amps: — 30-100A (See Catalog Number table for details)

**Agency Information:** CE, CSA C22.2 No. 39; IEC 269 AND BS 88.

**Mounting:** 35mm DIN-rail or single screw mounting.

### SAFEloc

#### Specifications

#### Catalog

#### Symbol:

See table below.

#### Description:

The SAFEloc HRC fuse holders (for use with HRCI-CB fuses) provides a positive, stress-free fuse fitting and locks it in position to ensure safe insertion and withdrawal from the base. Base contacts are fully shrouded to help protect against electric shock. Shrouds utilize simple slide/snap action allowing access to the contact terminal screws.

#### Ratings:

Volts: — 600V

Amps: — 30-60A (See Catalog Number table for details)

**Agency Information:** CE, Designed to accommodate the compact range of offset blade fuse to CSA C22.2 No. 106, HRCI-CB.

**Mounting:** 35mm DIN rail or single screw mounting.
